TYPICAL APPLICATION

The **FAIRFIELD INDUSTRIES** RFP Series Remote Ports are designed as a raintight fill box with spill containment for use in the filling of aboveground storage tanks.

These Remote Fill Ports are specifically used where delivery trucks are equipped with transfer pumps and are intended to contain spillage incurred during delivery for transfer back to AST.

The RFP Series of Remote Fill Ports are free standing, pad mountable and constructed of stainless steel for long life. Front door is pad lockable for restricted access and hinged down for full access.

Units are suitable for gasoline, oils and various chemical applications and come standard with a 1" FPT drain fitting. Outlet connections are flexible BUNA-N entry boots and are available in 2", 3" and 4" pipe sizes. Internal connections, valves and piping are field supplied and installed. Optional evacuation pump and sump are available on request.
